EDUCATION

Computer Science for Software Development

York University - BASc

Markham, ON

Expected Apr. 2028

- **Relevant Coursework:** Data Structures & Algorithms, User Interfaces, Software Design, Object-Oriented Programming, Intro to Cloud.

EXPERIENCE

Fullstack Engineer

Dec 2025 – Present

Circe – Contract Part-Time

- Engineered the **Media Pool** feature in the **React Native** app—responsive grid, selection/starring UX, and upload/ingest + delete/unlink flows—spanning **7 core components/hooks** across **46 files** touched over **70 commits**.
- Built and hardened a **REST API** with **FastAPI** and **PostgreSQL** for secure, scalable user profile management, resulting in reliable authentication and **robust data protection**.
- Coupled client-side software to internal systems via **TypeScript API client** and custom **React hooks**, handling loading, error, and update states, which improved real-time data accuracy and **user experience**.
- Engineered **5 authentication flows** (sign-in, sign-up, confirmation, password reset, forgot password) with robust validation and real-time error messaging, enhancing **account security** and reducing **user errors**.
- Refactored **2,000+ lines** across **8+ files** for **reduced duplication** and **streamlined development**, which simplified maintenance and enabled faster feature updates.

PROJECTS

Interactive 3D Portfolio Experience | *Astro, Svelte, Three.js, GSAP, TailwindCSS*

- Engineered a **modular, checkpoint-driven** 3D portfolio with reusable scene systems; galaxy renders **25,000+ particles** and a **1,800-star** field using a single merged **Points** buffer.
- Built **GSAP** timelines and an **AudioManager** to synchronize animations and SFX across **six checkpoint** sections for smooth, **scroll-driven** guided interactions.
- Reduced runtime cost via **chunked buffer updates** (**12%** of particles per frame, min **1.2k**), **renderer tuning**, and **depth-based** size/opacity adjustments.
- Automated builds and deployments using **GitHub Actions** (**build** → **artifact** → **deploy**) for repeatable production releases.

jamSpace | *Python, Flask, HTML, CSS, JavaScript*

- Built a **Flask** productivity suite with **5 integrated apps** (Pomodoro, Habit Tracker, Focus Logger, Time Blocks, Time Capsule) across **2 Blueprints** and **22 routes**, with a shared base template for consistent UX.
- Implemented a time-block planner with **monthly/weekly views**, recurring block expansion, and **AJAX-driven** navigation, generating a **42-day** calendar grid with modal-based CRUD and category-styled completion toggles.
- Engineered **JSON-backed CRUD** flows across 4 apps with client-side **Pomodoro** stats, session streak tracking, speech-synthesis alerts, and date-based readiness states.

exposr | *React, Node, JavaScript, Python, PostgreSQL, Supabase*

- Built a full-stack photo app with a **weekly reveal** system, as measured by scheduled drops and **60s** job polling, by implementing **Express** APIs and Supabase-backed reveal scheduling.
- Implemented a secure upload pipeline, as measured by **10MB** size caps and a **5-minute** EXIF freshness window, by integrating **Multer**, **exifr**, and **JWT** auth.
- Developed a **Python** image processor, as measured by standardized **600x600** outputs with grain/light-leak/vignette effects, by composing **Pillow+NumPy** filters and server-side transforms.

Legends of Sword and Wand | *Java, Spring Boot, Maven, Docker, GitHub Actions*

- Architected an **8-module** Spring Boot monorepo with **6 independently deployable services** and a shared core, using Maven multi-module build and centralized dependency management.
- Authored a **GitHub Actions** CI/CD pipeline with unit tests, Docker Compose smoke tests, and a **6-service** Buildx image matrix for fully automated publishing.
- Containerized the full stack with per-service **Dockerfiles** and a top-level **Docker Compose** config, enabling one-command local integration bring-up.

TECHNICAL SKILLS

Programming Languages: Java, Python, C, C++, SQL, JavaScript, TypeScript, HTML5, CSS, Bash

Libraries & Frameworks: React, FastAPI, Astro, Svelte, Three.js, GSAP, WebGL, Flask, TailwindCSS, Express

Databases: PostgreSQL, SQLite

Tools & Platforms: Git, GitHub, AWS, Docker, VS Code, Linux, GitHub Actions, Jest, Maven, Expo, Supabase

AI & Automation: Claude Sonnet, Copilot
