

Jaelan Cruz

Toronto, ON | jaelancruz@yahoo.com | linkedin.com/in/jaelan-cruz | jaelancruz.dev

EDUCATION

Computer Science for Software Development

York University - BASc

Markham, ON

Expected Apr. 2028

- **Completed:** Data Structures & Algorithms, User Interfaces, Software Design, Object-Oriented Programming, Intro to Cloud
- **In Progress (2026–27):** Operating Systems, Programming for Multicore CPUs & GPUs, Distributed Computing & Cloud Systems, Databases, Software Testing & Quality, Software Requirements & Analysis

EXPERIENCE

Onboarding Software Engineer

ForegoneAI

Sep 2026 – Present

Fullstack Engineer

Circe – Internship

Dec 2025 – Jul 2026

- **Reached launch with zero auth-related bugs**, having built all 5 account flows—sign-in, sign-up, confirmation, password reset, forgot password—with real-time validation
- Restricted profile edits to account owners through **JWT** ownership checks on the user profile backend API, written in **FastAPI**
- Eliminated a silent stale-data bug so users always see current data, by rewriting the **TypeScript** API client layer between frontend and backend
- Caught redundant AI-added imports before merge after a senior engineer taught me to treat **Claude Code** and Copilot as review tools, not code generators
- Shipped through standups, sprint tickets, and code reviews with designers and engineers, incorporating feedback on every merge

Technical Lead

Riipen Labs / PawsKnow – Consulting Project

Aug 2026

- Led feasibility and risk assessment on a 5-person consulting team advising a pre-launch pet care startup
- Cut proposed strategies that exceeded the client's budget, headcount, or delivery timeline before launch
- Delivered a customer experience report with a recommended strategy and phased rollout plan

PROJECTS

Legends of Sword and Wand | Java, Spring Boot, JUnit, Mockito, Maven, Docker, SQLite, GitHub Actions

- Made new hero classes and abilities pluggable without touching the battle engine, by designing the combat system for a multiplayer **Java** RPG around the Strategy and Observer patterns
- **Guarded against stalled fights** that would otherwise loop forever, in a turn-based battle engine resolving turn order, damage, healing, and status effects each round
- **96 unit tests** in **JUnit** and **Mockito** across 5 services and the shared core, covering battle logic, party management, and hero classes
- **Blocked unverified code from shipping** with a 3-stage GitHub Actions pipeline—unit tests, a full **Docker** spin-up checking every service responds, then image publishing

exposr | React, Node.js, Express, Python, PostgreSQL, Supabase

- Kept uploads hidden until a scheduled weekly release date in a **React** photo-sharing app backed by an **Express** API
- **Rejected photos older than 5 minutes** at upload by parsing EXIF capture timestamps server-side, blocking camera-roll submissions

3D Particle Renderer | C++17, OpenGL, GLSL, CMake

- Wrote the **OpenGL** rendering pipeline from scratch for a real-time 3D particle simulator in **C++17**
- Simulated gravity, Euler integration, and ground-collision response with restitution and lateral damping in the physics engine

Interactive 3D Portfolio Experience | Astro, Svelte, TypeScript, Three.js, TailwindCSS

- Composed a personal portfolio site from **8 reusable Svelte** components with scroll-driven section transitions, deployed automatically on every push via **GitHub Actions**

TECHNICAL SKILLS

Programming Languages: C++, Java, Python, SQL, JavaScript, TypeScript, HTML, CSS

Libraries & Frameworks: React, Node.js, Express, Spring Boot, FastAPI, Flask, Astro, Svelte, TailwindCSS

Databases: PostgreSQL, SQLite, Supabase

Tools & Platforms: Git, GitHub, Docker, Linux, AWS, Maven, JUnit, Mockito, Expo, JIRA, Agile

AI & Automation: Claude, GitHub Copilot, Codex
